## A Career in Entomology

Entomologists study insects and arthropods like bees, ants, beetles, spiders, scorpions etc. These creatures are an important part of the ecosystem and an education in Entomology helps us identify what insects can be beneficial for us and what insects we need to stay away from. Entomologists choose to either do your own study on these tiny creatures or collaborate with others to study how the insects can help everyone.

## Agricultural Entomologists

Despite the popular belief, not all insects are harmful for Agricultural production. An Agricultural Entomologist can help farmers preserve the helpful insects in the soil while helping them protect their crops from the harmful ones. Entomologists help us produce more food and reduce the harm to the environment by limiting the use of pesticides.

## Medical Entomologists

Entomologists work in the medical field as well in order to prevent diseases that can be spread by insects. They also work with other medical professionals to develop treatments for people that are infected. Studying Entomology can also help with finding new cures for diseases that spread because of the insects.
